

# Commercial Solar Photovoltaic (PV) Systems

**ASG Energy Services** is a commercial solar system designer, supplier and installer of Solar Photovoltaic (PV) systems. This proven technology can generate significant amounts of electricity, helping supplement existing energy supply and lower bills. Our design lead approach ensures you receive the optimum return on investment.

## What are the benefits of installing Commercial Solar Panels?

- 1 Lower energy bills - now and in the future
- 2 A reduction in your carbon emissions - lowering greenhouse gases
- 3 Typically, a return-on-investment within three years
- 4 A demonstration to your customers of your environmental credentials
- 5 Help towards your company's Net Zero commitments

## Installation

A Commercial Solar PV system can be mounted on a suitable roof with an orientation from East to West through the Southerly side of the compass. Our expert Solar PV team has vast experience, and our design-led approach ensures each system will optimise returns related to the electrical energy generated, helping lower your energy bills over the lifetime of the system - usually around 25 years plus.

The panels can be fitted to the roof of new warehousing or logistics facilities, or else retrofitted to existing facilities.

# Save Energy, Save Money... Save the Planet

## Installation continued

We take care of everything for you; the total solution covers site survey, system design, District Network Operator (DNO) approvals, Health & Safety compliance, total project management of the installation and electrical services connection.

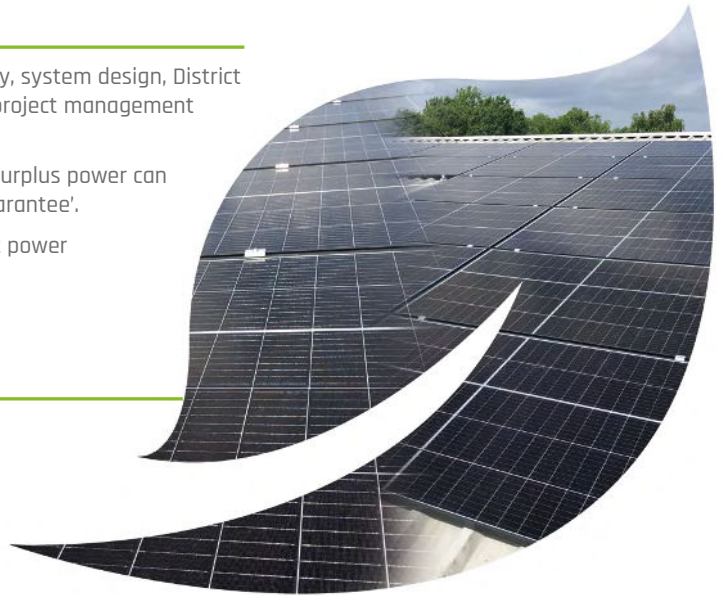

In addition to every unit you consume from your own PV system, any surplus power can be exported and sold to the grid via the government 'Smart Export Guarantee'.

For larger systems an additional income is available through an export power purchase agreement typically at a higher rate.

## Quality Components

ASG Energy Services only uses the highest quality 'tier one' bankable Solar PV panels, mounting systems and inverters. All are proven for the UK-market and these, together with our first-class design and installation teams, guarantee your total satisfaction.
